Art Unit: 1655

DETAILED ACTION

Election/Restriction

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-13, drawn to nucleic acids, classified in class 536, subclass 22.1+.
 - II. Claims 14-22, 62 and 83-91, drawn to polypeptides, classified in class 514, subclass 2+.
 - III. Claims 23-36, drawn to host cell, classified in class 435, subclass 240.2.
 - IV. Claims 37-61 and 63-67, drawn to method of screening an agent, classified in class 436, subclass 501.
 - V. Claims 68-82, drawn to method of expression of proteins, classified in class 435, subclass 69.1+.
- 2. The inventions are distinct, each from the other because of the following reasons: Inventions of Group I and Groups II, III, IV and V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions of nucleic acid of Group I are not disclosed as capable of use together with polypeptides of Group II, host cell of Group III, method of screening an agent of Group IV and method of expression of proteins of Group V and the nucleic acid of Group I have different modes of operation, different functions, or different effects than polypeptides of Group

Art Unit: 1655

II, host cell of Group III, method of screening an agent of Group IV and method of expression of proteins of Group V.

- 3. Inventions of Group II and III, IV and V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions of polypeptides of Group II are not disclosed as capable of use together with host cell of Group III, method of screening an agent of Group IV and method of expression of proteins of Group V and polypeptides of Group II has different modes of operation, different functions, or different effects than host cell of Group III and method of screening an agent of Group IV and method of expression of proteins of Group V.
- 4. Inventions of Group III and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the host cell of Group III can be used to a method for screening for an agent that alters mitochondrial permeability transition of Group IV or to produce a transgenic animal or to produce antibody.
- 5. Inventions of Group III and V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the

Art Unit: 1655

Page 4

different inventions of host cell of Group III are not disclosed as capable of use together with the method of expression of proteins of Group V and host cell of Group III has different modes of operation, different functions, or different effects than expression of proteins of Group V.

- 6. Inventions of Group IV and V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions of method of screening an agent of Group IV are not disclosed as capable of use together with the method of expression of proteins of Group V and method of screening an agent of Group IV has different modes of operation, different functions, or different effects than expression of proteins of Group V.
- 7. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 8. A telephone call was made to Stephen Rosenman on May 16, 2001, to request an oral election to the above restriction requirement, but did not result in an election being made.
- 9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

,

Page 5

Art Unit: 1655

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Conclusion

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arun Chakrabarti, Ph.D., whose telephone number is (703) 306-5818. The examiner can normally be reached on 7:00 AM-4:30 PM from Monday to Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Jones, can be reached on (703) 308-1152. The fax phone number for this Group is (703) 305-7401.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-0196.
